

ABSTRACT OF THE DISCLOSURE

On a glass substrate, a prism sheet for condensing rays emitted from an emitting layer, a circularly polarizing filter, and an antireflection film are laminated. The prism sheet is provided for each of red, green and blue display elements of the emitting layer and is divided by separators so as not to interfere one another. Control electrodes are laminated on and under the emitting layer. A positive pole is formed from ITO film and a hole carrying layer; and a negative pole is formed from a metal electrode and an electron carrying electrode.
